Statistics

I EXECUTIVE SUMMARY

This report presents population projections for Manitoba during the period 1991 - 2016. Three series of population projections (labelled **LOW**, **MEDIUM** and **HIGH**) are presented, based on the 1991 Census population and recent demographic information on births, deaths and migration.

The three scenarios assume:

(1) Manitoba's total fertility rate will remain constant at 1.95 for the projection period.

(2) For the MEDIUM and HIGH scenarios, an increased level of international migration, from a net of 3,600 in 1991 rising to 5,000 in five years and holding at that level for the remainder of the period.

The LOW scenario assumes a decline to a value of 3,000 over the same time period.

(3) Net interprovincial migration of -8,100 for the first year, gradually moderating to a net figure of -6,000 by the year 2006 for LOW and MEDIUM.

The HIGH scenario has the net figure moderating to -3,000 by 2006.

(4) The life expectancy at birth increasing for females and males by 3.8 and 4.1 years respectively.

Under the MEDIUM projection scenario, Manitoba's population of 1,091,900 in 1991 will increase to 1,183,000 by June 1, 2016. This represents an average annual increase of 0.3%. The LOW and HIGH scenarios are projected to have average annual increases of 0.1% and 0.5% respectively.

YEAR (JUNE 1)	MANITOBA POPULATION (000's)			MEDIAN AGE (YEARS)		
	LOW	MEDIUM	HIGH	LOW	MEDIUM	HIGH
1991	1091.9	1091.9	1091.9	33.0	33.0	33.0
1996	1105.6	1110.7	1112.0	34.8	34.8	34.8
2001	1112.8	1128.8	1139.8	36.7	36.5	36.4
2006	1118.8	1146.5	1173.8	38.0	37.6	37.2
2011	1124.9	1165.1	1210.9	39.0	38.5	37.9
2016	1129.8	1183.0	1248.4	39.9	39.4	38.5

The constant total fertility rate and the ageing of the population will result in a decreased number of births throughout most of the projection period. From 17,000 in 1991, the number of births is projected to drop by 14.7% to 14,800 in fifteen years, with only a slight increase to 15,200 occurring by the year 2015.

The effect of the ageing population on the number of deaths will be moderated by the projected increase in the life expectancy at birth but still result in an increased annual number of deaths. The number of deaths is projected to increase by 17.6%, from the present 9,100 to 10,700 over the next 25 years.

Similar patterns are projected for the LOW and HIGH scenarios.

II INTRODUCTION

This set of population projections for the Province of Manitoba has been developed in consultation with the Demographic Statistics Committee. This committee, chaired by the Manitoba Bureau of Statistics is composed of representatives from 6 other departments and agencies of the Manitoba government:

i) Education & Training
ii) Family Services
iii) Health
iv) Industry, Trade and Tourism
v) Manitoba Health Services Commission
vi) Manitoba Hydro

The Demographic Statistics Committee reviewed draft projections and adopted LOW, MEDIUM and HIGH scenarios.

The projections in this report are based on the 1991 Census population for Manitoba of 1,091,900 and are meant to replace the Manitoba level population projections produced in March, 1989. The projections will be reviewed annually and revised when necessary.

Projections are not forecasts but are based on what would occur if the stated assumptions hold true. As the process of change is cumulative, the reliability of the projections may decrease over time. A review of the performance of previous projections is presented in Appendix D.

The Manitoba Bureau of Statistics is presently developing a set of regional population projections that will be compatible with the Manitoba level projections. These regional projections will incorporate recent demographic information for the 8 Economic Regions.

Population projections can be prepared for departments' and agencies' user-defined areas, departmental regions or special sub-populations on a cost-recovery basis.

To obtain further information on this report or to order custom projections, please contact David Greenwood at (204) 945-2989.

III MANITOBA PROJECTED POPULATION 1991 - 2016

Table 1 illustrates the projected population (MEDIUM scenario) for Manitoba during the period 1991 to 2016. Also shown in the table are the projected components of population growth for the Province.

Similar data is presented in Appendix B and C for the LOW and HIGH scenarios respectively.

Manitoba's population of 1,091,900 as of June 4, 1991 is projected to increase throughout the 25 year projection period to a figure of 1,183,000 by June 1, 2016 (for an average annual increase of 0.3%).

A constant total fertility rate of 1.95 for Manitoba and the ageing of our population will result in a projected decrease in the number of births from 17,000 in 1991 to 14,800 in the early 2000's. A second generation echo of the baby boom will result in a moderately increased number of births to 15,200 by the end of the projection period.

The projected increase in life expectancy at birth for females and males will not entirely moderate the ageing of the population so the projected number of deaths will increase from 9,100 to 10,700 by the year 2015.

The natural increase of the population (births minus deaths) will decrease from 8,000 in 1991 to a value of 4,500 for the last year of the projection period.

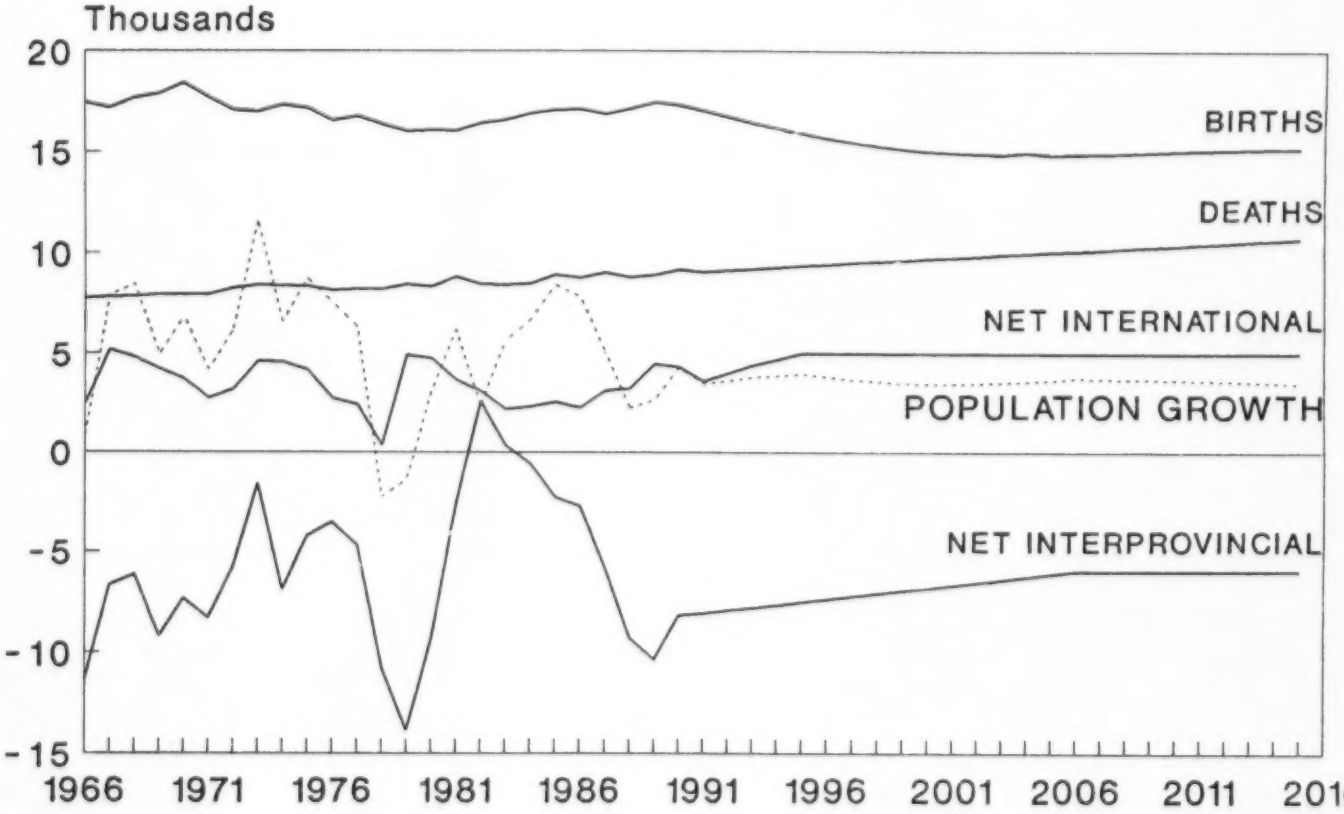
Net international migration is projected to increase from a present level of 3,600 to 5,000 by the mid 1990's and stay at that figure for the remainder of the projection period.

Net interprovincial migration is at -8,100 for 1991. Due to the ageing of the population (with lower propensity to migrate), net interprovincial migration will moderate to -6,000 annually over the next 15 years.

Total net migration will range from -4,500 in 1991 to a level of -1,000 for the last 10 years of the projection period.

Annual population gains for Manitoba will vary from 3,500 to 4,000 throughout the projection period.

CHART 1. COMPONENTS OF POPULATION GROWTH MANITOBA: MEDIUM SCENARIO 1966-1991 ESTIMATED 1992-2016 PROJECTED



MANITOBA BUREAU OF STATISTICS

AUGUST 1992

The age distribution will change during the projection period with a decreased percentage of children and increased percentage of seniors. The percentage of children (aged 0-14 years) is projected to decrease from 22.0% in 1991 to 18.6% in 2016 as the percentage of seniors (aged 65 and over) is projected to increase from 13.4% to 16.6%. Meanwhile, the percentage of adults (aged 15-64) will go from 64.6% to 64.7%.

Within the adult population, the age distribution will change dramatically with the 30-34 age category having the largest population of 92,700 in 1991. However, by the year 2016, the 55-59 age category will have the largest population at 83,600.

This would seem to imply that the greatest increase in the number of seniors is to come after the year 2016, probably in the mid 2020's.

IV PROJECTED POPULATION COMPONENTS

This section provides historical and projected data (Chart 1) on the 4 population components:

fertility
international migration
interprovincial migration
mortality

i) FERTILITY

The fertility assumption is expressed as the total fertility rate (1), the expected number of births per woman during the period 15 - 49 years of age.

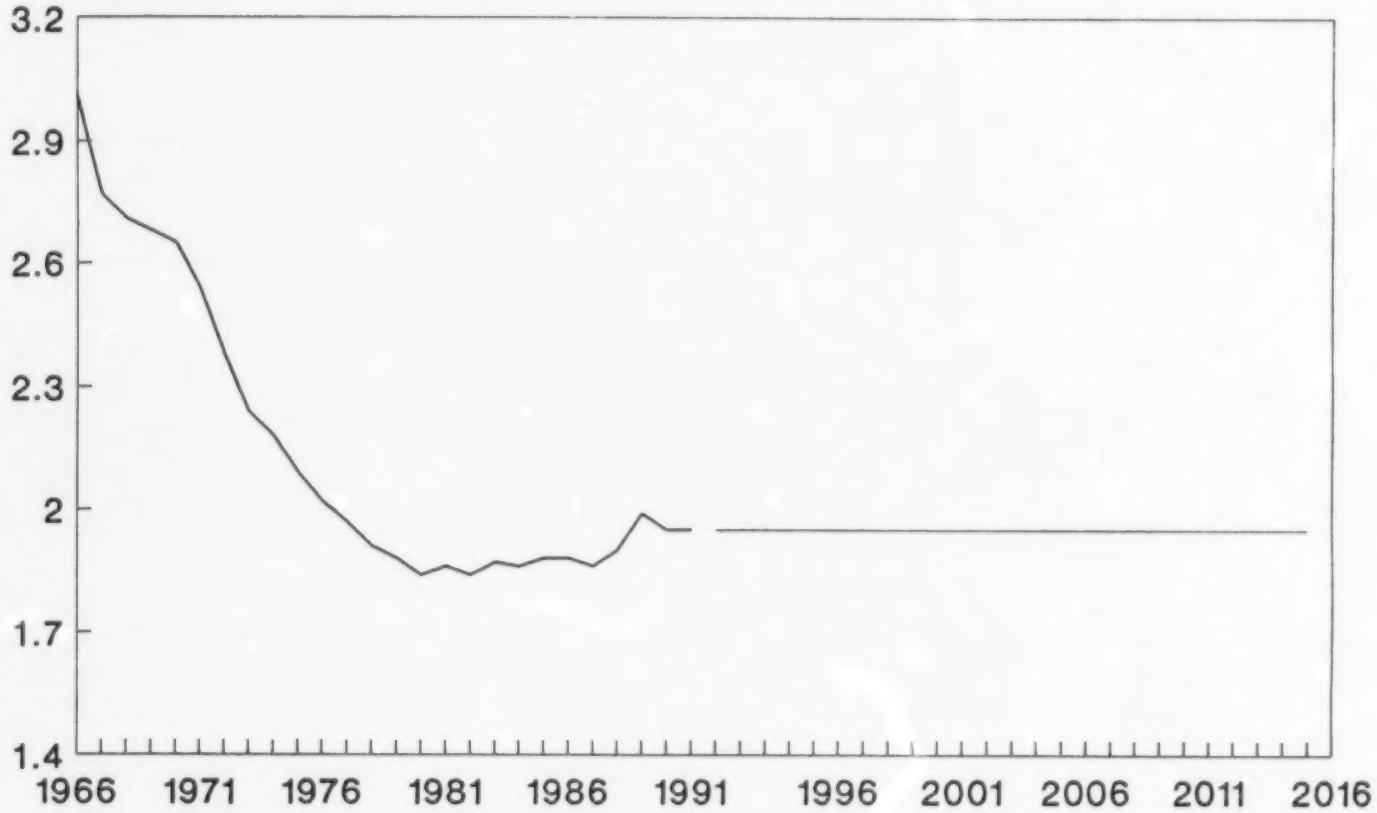
Table 2 shows the estimated and projected total fertility rates (TFR) for Manitoba on a quinquennial basis from 1971 to 2016.

It is projected that the decline in the total fertility rate over the past decades has stopped (as shown in Chart 2) and in spite of the slight recent upturn, the rate is projected to remain constant throughout the projection period for all three scenarios.

---

1 - The total fertility rate is defined as the sum of the female age-specific fertility rates multiplied by 5 where the age-specific fertility rate is the birth rate per woman in the respective 5 year age period from 15 - 49 years of age.

CHART 2. TOTAL FERTILITY RATES
MANITOBA: MEDIUM SCENARIO
1966-1991 ESTIMATED 1992-2016 PROJECTED



MANITOBA BUREAU OF STATISTICS

AJGUST 1992

TABLE 2 MANITOBA TOTAL FERTILITY RATE

ACTUAL					PROJECTED
1971	1976	1981	1986	1991	
2.54	2.02	1.86	1.89	1.95	1.95

The number of births in Manitoba is projected to decline throughout the first 15 years of the projection period with only a slight increase during the last 10 years.

The ageing of the female population and a decrease in the number of females in their 20's (the peak child-bearing years) results in the projected number of births declining from 17,000 in 1991 to 14,800 by the year 2005. A second generation echo of the baby boom produces a projected slight increase in the number of births to 15,200.

ii) INTERNATIONAL MIGRATION

Table 3 shows the international migration components for Manitoba during the period 1979 to 1990 and projected components to 2015. This information is also presented in Chart 3.

The immigration component is considerably more volatile than the emigration component.

For the MEDIUM and HIGH scenarios, immigration will rise from a level of 5,600 in 1991 to 7,000 in 1995 and remain at that level for the remainder of the projection period. For the LOW scenario, the level is projected to drop to 5,000 by 1995 and remain at that level.

Emigration is projected to remain constant at 2,000 per year for the entire projection period.

1990	6,382	2,078	4,304
1991	5,585	2,012	3,573

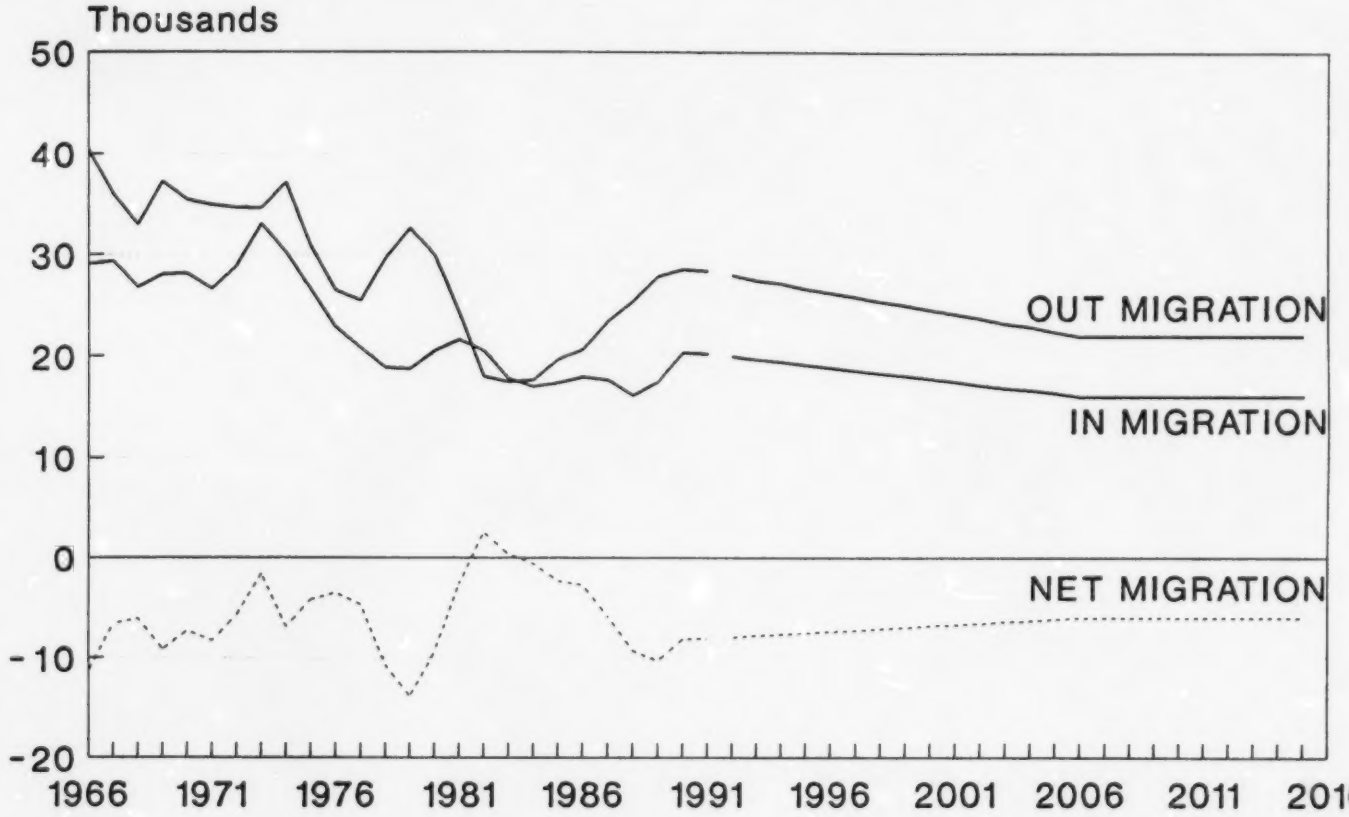
Projected

	LOW SCENARIO			MEDIUM & HIGH SCENARIOS		
	IN	OUT	NET	IN	OUT	NET
1991	5,600	2,000	3,600	5,600	2,000	3,600
1992	5,500		3,500	6,000		4,000
1993	5,400		3,400	6,400		4,400
1994	5,200		3,200	6,700		4,700
1995	5,000		3,000	7,000		5,000
↓	↓	↓	↓	↓	↓	↓
2015	5,000	2,000	3,000	7,000	2,000	5,000

iii) INTERPROVINCIAL MIGRATION

Interprovincial migration is the most volatile component of population growth and can have the greatest impact on the year-to-year change in Manitoba's population.

CHART 4. INTERPROVINCIAL MIGRATION
MANITOBA: MEDIUM SCENARIO
1966-1991 ESTIMATED 1992-2016 PROJECTED



MANITOBA BUREAU OF STATISTICS

AUGUST 1992

TABLE 4 MANITOBA INTERPROVINCIAL MIGRATION COMPONENTS

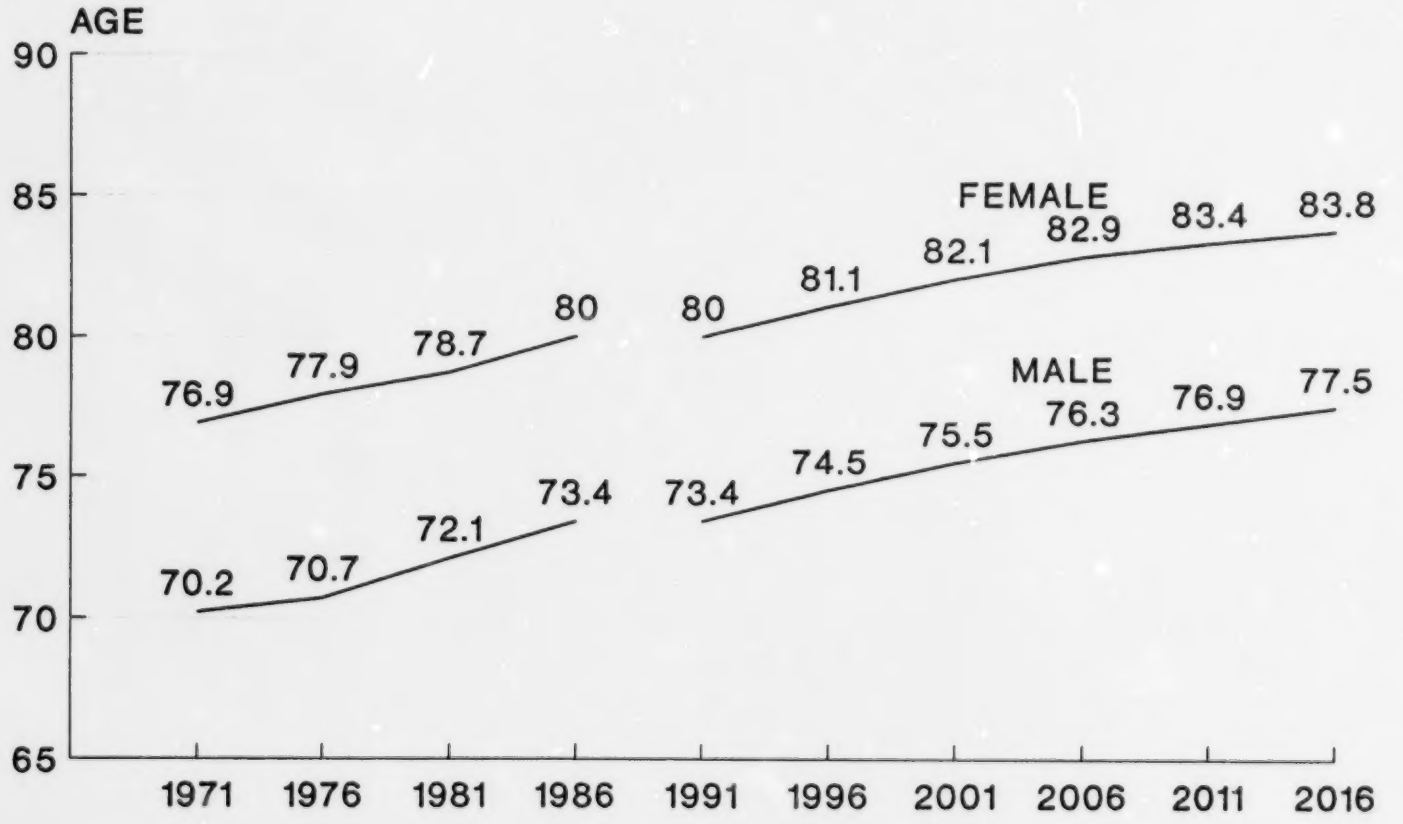
	IN	OUT	NET
Estimated			
1979	18,690	32,554	-13,864
1980	20,468	29,871	-9,403
1981	21,601	24,226	-2,625
1982	20,454	17,910	2,544
1983	17,731	17,392	339
1984	16,982	17,577	-595
1985	17,310	19,607	-2,297
1986	17,855	20,589	-2,734
1987	17,566	23,441	-5,875
1988	16,084	25,397	-9,313
1989	17,430	27,791	-10,361
1990	20,305	28,476	-8,171
Projected			

	LOW & MEDIUM SCENARIOS			HIGH SCENARIO		
	IN	OUT	NET	IN	OUT	NET
1991	20,200	28,300	-8,100	20,200	28,500	-8,300
↓	↓	↓	↓	↓	↓	↓
2005	16,300	22,400	-6,100	18,100	21,500	-3,400
2006	16,000	22,000	-6,000	18,000	21,000	-3,000
↓	↓	↓	↓	↓	↓	↓
2015	16,000	22,000	-6,000	18,000	21,000	-3,000

Due to the ageing of the population and a decreased propensity to migrate, the net interprovincial migration is projected to moderate from the recent estimate of -8,200 for 1990 to a level of -6,000 by 2006 for the LOW and MEDIUM scenarios and to a level of -3,000 by 2006 for the HIGH scenario.

Chart 4 presents data on Manitoba's interprovincial migration for the period 1966 to 2015. During the period from 1966 to 1990, net interprovincial migration has ranged from -13,864 in 1979 to 2,544 in 1982 with the average for the last 25 years being -5,953.

CHART 5. LIFE EXPECTANCY AT BIRTH
MANITOBA: MEDIUM SCENARIO
1971-1986 ESTIMATED 1991-2016 PROJECTED



MANITOBA BUREAU OF STATISTICS

AUGUST 1992

iv) MORTALITY

The assumption for mortality is expressed as the life expectancy at birth which is calculated from life survival tables for Manitoba. Table 5 and Chart 5 show the Manitoba life expectancy at birth for females and males on a quinquinrial basis.

It is projected that the life expectancy for Manitoba females will increase 3.8 years during the projection period, from a figure of 80.0 years in 1991 to 83.8 years by 2016. For the same time period, the life expectancy for males is projected to increase by 4.1 years from 73.4 to 77.5 years by 2016.

These assumptions are made for all three population projection scenarios.

These life expectancies have been carried forward from the 1986 Census based set of projections since MBS is not able to produce new life tables at this time. The use of these life expectancies has resulted in the projected number of deaths being inflated (by approximately 100 per year).

TABLE 5 LIFE EXPECTANCY AT BIRTH: MANITOBA

	ACTUAL				PROJECTED	
	1971	1976	1981	1986	1991	2016
Females	76.9	77.9	78.7	80.0	80.0	83.8
Males	70.2	70.7	72.1	73.4	73.4	77.5
Female-Male Difference	6.7	7.2	6.6	6.6	6.6	6.3

Although the life expectancy of Manitobans is projected to increase, the changing age distribution of the population will result in a projected increase in the annual number of deaths from 9,100 in 1991 to 10,700 by the end of the projection period.

With the reduced number of births also occurring, the natural increase in the population is projected to be reduced, from a present figure of 8,000 down to 4,500 by 2015.

MANITOBA BUREAU OF STATISTICS AUGUST 1992

APPENDIX D PERFORMANCE OF PREVIOUS POPULATION PROJECTIONS

This report contains the third set of population projections for Manitoba that have been developed by the Demographic Statistics Committee.

The first set was based on the 1981 Census and had the following assumptions:

i) The total fertility rate was to decline from 1.86 in 1981 to 1.45 by 1996 and stay at that level until 2006.

ii) Net international migration of 2,530 per year for most of the projection period.

iii) Net interprovincial migration averaging -1,100 from 1981 to 1995. From a net of 390 in 1981, interprovincial migration had been projected to remain positive until 1988.

For this projection, Manitoba's population of 1,047,200 in 1983 was to increase to 1,137,600 in 1997 before declining to 1,127,000 in 2006. This decline was due to the projected Total Net Migration being a larger negative than the natural increase (births minus deaths) was to be positive. In fact, the natural increase was projected to be negative for 2004 and 2005.

The second set of population projections was based on the 1986 Census population (adjusted for unenumerated Indian Reserves) and had the following assumptions:

i) A constant total fertility rate of 1.89.

ii) Net international migration of approximately 2,900 annually.

iii) Net interprovincial migration of -6,300 in 1987 moderating to -2,500 by 2010.

For this projection, Manitoba's 1986 population was to increase by 11.1% to 1,189,700 by June, 2011. This represented an annual average increase of 0.4%.

The table on the next page shows the estimated components of population growth for Manitoba during the 10 year period 1981 to 1990 with totals for the first and second 5 year periods.

The estimated totals of population growth components for June, 1986 - May, 1991 can be compared to the 5 year totals of the 1981 Census based and 1986 Census based projections to determine the performance of the previous projections.

MANITOBA COMPONENTS OF POPULATION GROWTH: 1981 TO 1990

CENSUS YEAR	POPULATION ('000's)	BIRTHS	DEATHS	NATURAL INCREASE	INTERNATIONAL MIGRATION			INTERPROVINCIAL MIGRATION			TOTAL NET MIGRATION
					IMMIGRATION	EMIGRATION	NET MIGRATION	IN MIGRATION	OUT MIGRATION	NET MIGRATION	
1981	1,026.2	16,041	8,814	7,227	5,219	1,570	3,649	21,601	24,226	-2,625	1,024
1982	1,033.3	16,393	8,441	7,952	4,554	1,487	3,067	20,454	17,910	2,544	5,611
1983	1,045.6	16,574	8,415	8,159	3,939	1,745	2,194	17,731	17,392	339	2,533
1984	1,055.1	16,883	8,478	8,405	3,559	1,255	2,304	16,982	17,577	-595	1,709
1985	1,064.0	17,080	8,900	8,180	3,839	1,299	2,540	17,310	19,607	-2,297	243
5 YEAR TOTAL		82,971	43,048	39,923	21,110	7,356	13,754	94,078	96,712	-2,634	11,120

MANITOBA BUREAU OF STATISTICS

AUGUST 1992

ESTIMATED & PROJECTED POPULATION OF MANITOBA FOR 1986 - 1991 (in 000's)

YEAR	ESTIMATE	CENSUS	1986 BASED PROJECTION	PROJECTED - CENSUS	1981 BASED PROJECTION	PROJECTED - CENSUS
1986	1071.2	1071.2	1071.2	0.0	1077.5	6.3
1987	1079.0		1079.0		1088.4	
1988	1084.1		1084.3		1099.1	
1989	1086.3		1089.9		1108.3	
1990	1089.1		1095.7		1116.3	
1991	1093.2	1091.9	1101.5	9.6	1122.9	31.0

This analysis will be based on the 1986 and 1991 Census figures since revisions are still to be made to the population estimates for 1987 to 1990 and components of population growth for 1990.

For the 1986 Census based projections, the 1991 projected population is 9,600 higher than the 1991 Census count. Components creating this difference over the 5 year period are net interprovincial migration (10,300 lower than projected), net international migration (2,900 higher than projected), deaths (900 higher than projected) and births (300 higher than projected).

For the 1981 Census based projections, the 1986 projected population was 6,300 higher than the 1986 Census (adjusted for unenumerated Indian reserves). The 1991 projected population is 31,000 higher than the 1991 census count. This implies the projected population has veered by an additional count of 24,700 between 1986 and 1991.

Components creating this difference over the 5 year period include net interprovincial migration (38,000 lower than projected), net international migration (4,700 higher than projected), births (9,400 higher than projected) and deaths (600 lower than projected).

From the preceding, it appears that the net interprovincial migration assumptions were too positive for both sets of projections while the 1981 Census based projections were also impacted by the declining fertility rate assumption.
